

## ***Precision Farming Data Cards for Site-Specific Agriculture***

We offer 32, 64, and 128 Meg Compact Flash Cards for the Ag Leader PF3000, Advantage and Insight Monitors. The SRAM cards are recommended only for the YM-2000.

***YM2000 Yield Monitors continue to work only with SRAM Cards.***

Card Readers come in internal and external versions. The internal installs in a drive bay in the front of a PC Computer (Similar to a CD ROM). The external reader plugs into the parallel (printer) port on the back of the computer or to a USB port. For Flash Cards, we recommend the 88740 on Windows XP. Our Model 88860 and 88960 are the only units that work for both ATA Flash **and SRAM** on Windows XP.
