Agri Motive Products Division of The Daugherty Companies, Inc. of Warren, Indiana today introduced the latest addition to their Vanguard System line of seed monitoring equipment, The Vanguard Vue. Initial showing will be at the National Farm Machinery Show in Louisville, KY February 11- 14.

The Vue takes the Vanguard System to a new level in Precision Agriculture with built-in dual GPS receivers capable of receiving both GPS and GLONASS signals. More than just a seed monitor, the Vue is capable of controlling up to four channels of seed and/or chemicals and offers clutch control for individual rows to reduce input costs.

The big 12.1" color touch-screen with crisp graphics makes the Vue easier for operator interface and includes a virtual light bar across the top of the screen for on-the-go guidance. A detachable light bar is available as an option. Upgrade to assisted steering or fully automated steering is quick and easy with RTK capabilities including a choice of either 450 or 900 MHz radios built in.

Other upgrades offered include passive or active implement steering, spraying and fertilizer control, field level and water management to design and level fields. Input from up to four external video cameras can be displayed on-screen.

Currently kits are being developed to upgrade existing planters, drills and air seeders that already have harness and sensors as well as kits for most new seeding equipment. Special applications will include systems specifically designed to monitor and control strip-till equipment.

The Vanguard Vue console starts at \$5,995 and options are priced separately. For more information call 1-800-258-2415 or visit www.ag-electronics.com .
