- Four Channel Video Camera Monitoring
- Implement Steering Option

***“Seed Monitoring With Control and Much More”***

***Planting - Guidance – Steering – Mapping – Spraying – Water Management***

Over 40 years experience in seed monitoring combined with the latest in GPS technology provide the perfect pedigree for.....

## The Vanguard **Vue**™

The **Vue** does it all! Seed Monitoring, Tru-Count Clutch Control, Variable Rate Seeding, track inputs and much more. Use the virtual light bar for guidance or upgrade to Trimble Autopilot\*. The built in dual GPS receivers make adding Trimble TrueTracker implement steering a quick and easy option.

The **Vue** can work for you. Installation kits are available to retrofit your existing planter, drill or air seeder. No need to spend thousands of dollars on new planting equipment. We have kits designed specifically for Strip-Till equipment as well.

With four channels of control, you can apply fertilizer, anhydrous and seed with the precision you expect from Vanguard. Four camera inputs let you monitor virtually any area of your equipment right from your cab.

The **Vue** is built for expansion. Think spraying, spreading, field level, implement steering – the options are many and more are added every year. Look at the **Vue** as an investment in shrewd production management.

***“No other product offers more flexibility – No other company offers more expertise”***
