

Vanguard Velo L/S GPS Digital Speed Display

The Vanguard Velo L/S is a small, compact digital speed display that uses GPS to give an accurate ground speed. It features a large, digital display and GPS status lights.

Powered by a 4-pin AMP connector, this unit will show true ground speed and transmit it to most agricultural monitors and controllers.

EASY TO INSTALL

Direct to monitor: Connect direct to most 4-pin connectors, Vanguard, DICKEY-john, Case and Agco. Simply connect your monitor speed connector to the Velo L/S 4-pin connector. The unit will be powered by your monitor.

Hooked with an Adapter: If your monitor does not have a 4-pin AMP connector you will need an adapter cable. This includes Raven, Hiniker, Micro-Trak and Tee Jet monitors or if you are connecting to a tractor radar cable.

Stand Alone Speed: For use on utility vehicles, automobiles, golf carts and other vehicles, a cigarette lighter plug power cord is available. Simply plug in and go for use as a stand-alone digital speedometer.

DESCRIPTION	PART NUMBER	LIST PRICE
Velo L/S GPS Speed Sensor	648110	\$339.00
